

Native Qwen3-TTS versus stock SGLang on NVIDIA DGX Spark

A reproducible Native versus SGLang comparison for Qwen3-TTS 1.7B VoiceDesign

Evidence field	Value
Benchmark ID	qwen3-tts-native-vs-sglang-stock-dgx-spark-2026-07-17-428307c
Evidence kind	production
Evidence timestamp	2026-07-17T23:18:36Z
Manifest SHA-256	1ecc13f96a07bd9642a93a810c1d4e6821b450cbc1a6679d0ef60552b5994682
Authors	Luka Löhr

This report is generated only from digest-verified JSON and JSONL evidence. The validator confirmed identical canonical workload keys, shared model repository/revision identity, and separately evidence-bound runtime artifacts for both implementations before aggregation.

Lower is better for TTFA, RTF, memory, power, energy, and local unpacked image size. Higher is better for throughput and reliability.

1. Executive summary

The summary reports observed measurements without extrapolation. Full percentiles and every benchmark profile appear in the sections that follow.

B1 metric	Native	SGLang	Native / SGLang
TTFA p95	94.77 ms	2694.89 ms	0.035
Aggregate RTF	0.801	0.498	1.608
Request throughput	0.288 req/s	0.469 req/s	0.614
Peak GPU unified memory	5.09 GiB	101.40 GiB	0.050
Success rate	100.00%	100.00%	n/a

Native streaming semantics: Progressive PCM chunks while generation is active. SGLang streaming semantics: Completion-buffered stock response.

2. Methodology and fairness controls

Method	Declared definition
Clock	Client monotonic clock
TTFA	Elapsed request time to the first playable PCM byte.
RTF	Measured scenario wall time divided by generated audio time.
Throughput	Successful requests divided by measured scenario wall time.
Memory	Peak measured process RSS and NVIDIA unified memory.
Power	NVIDIA board power sampled every one hundred milliseconds.
Energy	Trapezoidal board energy minus measured idle baseline energy.
Run order	Round one stock SGLang then Native; round two Native then stock SGLang.
Statistics	Two complete rounds with raw-request percentiles.

Power sampling interval: 100 ms. Warmup requests per run: 24.

Environment controls

- No competing CUDA processes from idle baseline through measured end.

3. System, model, and implementation versions

System under test

Field	Value
Host	NVIDIA DGX Spark (spark-benchmark-host)
OS and kernel	Ubuntu 24.04.4 LTS / 6.17.0-1021-nvidia #21-Ubuntu SMP PREEMPT_DYNAMIC Wed May 27 19:14:05 UTC 2026
Architecture and CPU	aarch64 / NVIDIA Grace
Accelerator	NVIDIA GB10 Blackwell
Driver and CUDA	580.159.03 / 13.0
Physical unified memory	119.21 GiB
Power source	NVIDIA board power.draw sampled by nvidia-smi

Model identity

Field	Value
Repository	Qwen/Qwen3-TTS-12Hz-1.7B-VoiceDesign
Revision	5ecdb67327fd37bb2e042aab12ff7391903235d3
Variant	1.7B VoiceDesign

Implementations

Field	Native	SGLang
Name	Qwen3 TTS Native	Stock SGLang Omni
Version	0.1.0-rc.1	0.1.0
Source commit	d5457a6ca3fc87df2190aa8ecd0fb36a5215a632	8e272bcb8832ef1a3865ec48255d36f4871ec885
Local image reference	luka-loehr/qwen3-tts-native:candidate-d5457a6	qwen3-tts-sglang-omni:0.1.0-stock-spark-f621145
Local Docker image ID	sha256:b716553161f7b5de41d1cad9ca512d213fad72b282a368194778aad30cf9c000	sha256:9930cc808840e9bac03577f664fda8b44735eb1e531c56fec8e9ad14c9eb41d2
Model parameters	2,030,999,489	2,087,233,793
Weight precision	bfloat16	bfloat16, float32
Artifact manifest	9bb96a8d24bbb2d8933245e27083b8e7290346b776306dcb8a8f3aed68594527	not available
API	HTTP/1.1 streaming raw PCM16	HTTP/1.1 raw PCM16
Streaming	Progressive PCM chunks while generation is active.	Completion-buffered stock response.

4. Time to first audio

TTFA ends when the client receives the first playable PCM bytes. Percentiles use linear interpolation over successful measured requests.

Profile	Engine	p50	p95	p99
B1	Native	86.48 ms	94.77 ms	101.57 ms
B1	SGLang	2256.83 ms	2694.89 ms	2718.52 ms
B3	Native	201.35 ms	216.14 ms	222.43 ms
B3	SGLang	2263.90 ms	2793.63 ms	3235.29 ms
B6	Native	391.92 ms	405.62 ms	420.10 ms
B6	SGLang	2383.24 ms	2929.51 ms	3332.01 ms

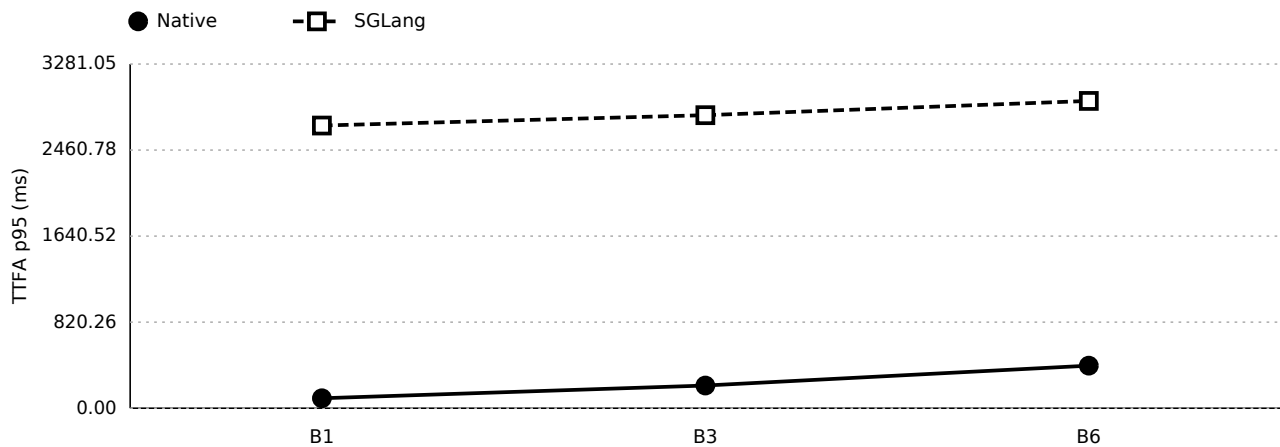

Figure 1. TTFA p95 by concurrency. Native uses a solid line and circle markers; SGLang uses a dashed line and square markers.

5. Real-time factor

Aggregate RTF is total scenario wall time divided by total successful audio duration. Summed-request-wall RTF is shown separately and must not be used as the B3/B6 throughput metric.

Profile	Engine	Aggregate	Summed request wall
B1	Native	0.801	0.801
B1	SGLang	0.498	0.498
B3	Native	0.642	1.736
B3	SGLang	0.192	0.506
B6	Native	0.617	3.273
B6	SGLang	0.107	0.535

Successful per-request RTF distribution

Profile	Engine	p50	p95	p99
B1	Native	0.800	0.808	0.827
B1	SGLang	0.498	0.513	0.527
B3	Native	1.838	1.931	1.960
B3	SGLang	0.506	0.523	0.545
B6	Native	3.298	3.805	3.842
B6	SGLang	0.535	0.554	0.562

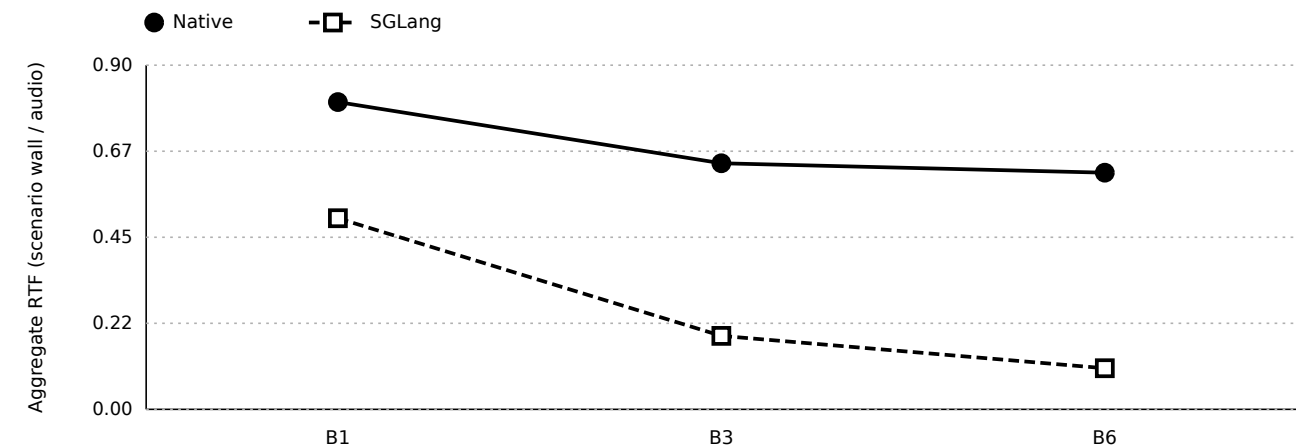

Figure 2. Scenario aggregate RTF by concurrency. Values below 1.0 mean the measured scenario produced audio faster than real time.

6. Throughput

Profile	Engine	Successful requests	Attempted requests	Audio
B1	Native	0.288 req/s	0.288 req/s	1.248 x
B1	SGLang	0.469 req/s	0.469 req/s	2.007 x
B3	Native	0.360 req/s	0.360 req/s	1.559 x
B3	SGLang	1.179 req/s	1.179 req/s	5.221 x
B6	Native	0.374 req/s	0.374 req/s	1.621 x
B6	SGLang	2.104 req/s	2.104 req/s	9.330 x

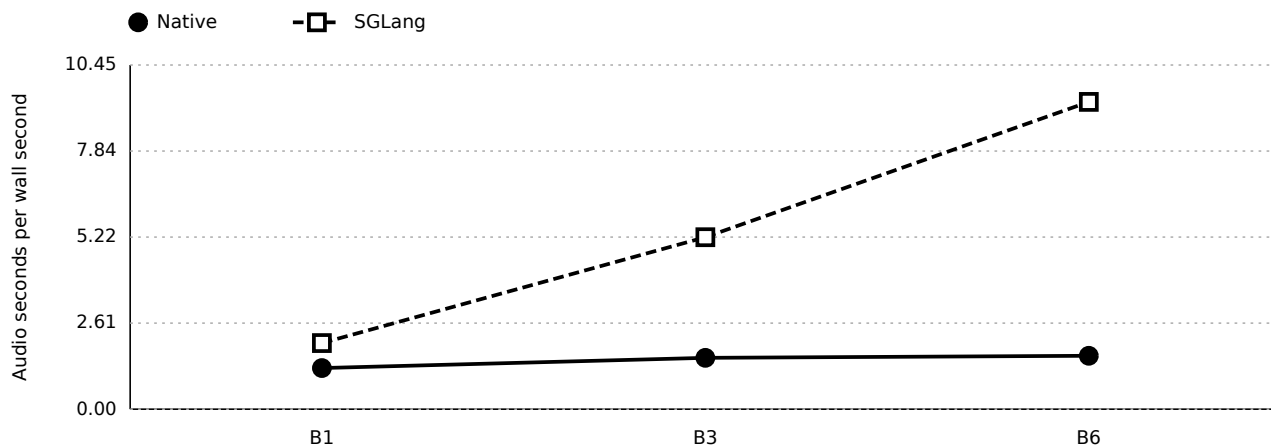

Figure 3. Aggregate audio throughput over each measured profile run.

7. Memory

Profile	Engine	Process RSS	GPU unified
B1	Native	1.87 GiB	5.09 GiB
B1	SGLang	5.00 GiB	101.40 GiB
B3	Native	1.87 GiB	5.17 GiB
B3	SGLang	5.02 GiB	101.40 GiB
B6	Native	1.87 GiB	5.29 GiB
B6	SGLang	5.03 GiB	101.42 GiB

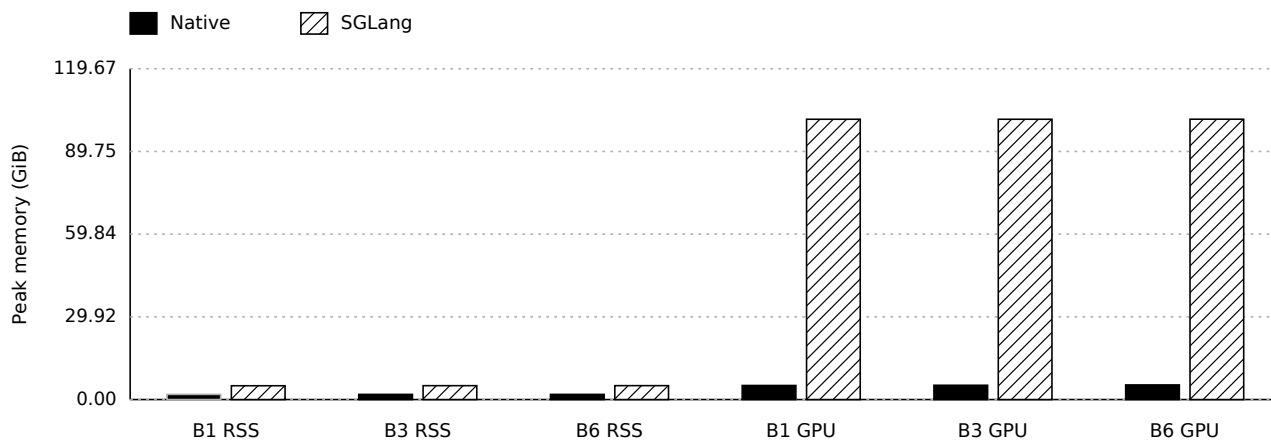

Figure 4. Peak process RSS and GPU-visible unified memory. Native is solid; SGLang is diagonal-hatched.

8. Power and energy

Profile	Engine	Mean power	Peak power	Energy/request	Energy/audio s
B1	Native	32.58 W	34.51 W	62.02 J	14.33 J/s
B1	SGLang	36.60 W	37.51 W	49.96 J	11.68 J/s
B3	Native	36.86 W	39.71 W	62.13 J	14.36 J/s
B3	SGLang	32.32 W	37.73 W	15.45 J	3.49 J/s
B6	Native	37.23 W	42.02 W	59.63 J	13.78 J/s
B6	SGLang	33.39 W	37.07 W	8.93 J	2.01 J/s

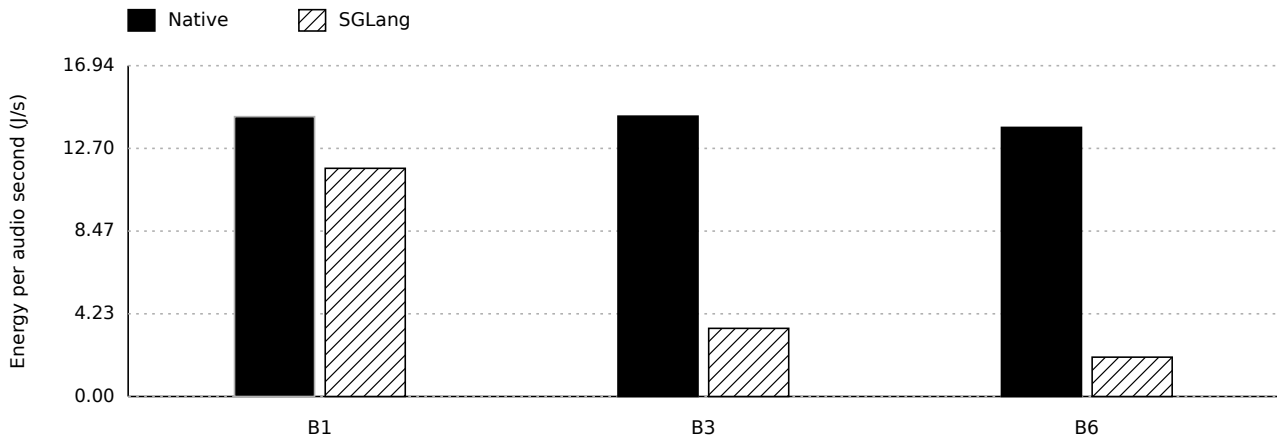

Figure 5. Request energy normalized by successful emitted audio duration.

9. Streaming cadence

Profile	Engine	Mean packets	Interval p50	Interval p95
B1	Native	14.60	253.81 ms	265.26 ms
B1	SGLang	13.18	0.00 ms	0.03 ms
B3	Native	14.60	583.77 ms	617.14 ms
B3	SGLang	13.63	0.01 ms	0.03 ms
B6	Native	14.60	1106.15 ms	1205.92 ms
B6	SGLang	13.66	0.01 ms	0.04 ms

A packet count of one yields no inter-packet intervals and is reported as 0.00 ms cadence. The implementation-declared streaming semantics remain visible because an HTTP streaming response is not necessarily progressive model generation.

10. Reliability

Profile	Engine	Total	Success	Error	Timeout	Cancelled	Rate
B1	Native	400	400	0	0	0	100.00%
B1	SGLang	400	400	0	0	0	100.00%
B3	Native	420	420	0	0	0	100.00%
B3	SGLang	420	420	0	0	0	100.00%
B6	Native	480	480	0	0	0	100.00%
B6	SGLang	480	480	0	0	0	100.00%

EOS policy is asymmetric by design: the Native protocol exposes a finish reason; stock SGLang raw PCM does not. Unknown is preserved rather than imputed.

Boundary policy: every production workload entry uses an exact 20.48-second ceiling. Successful stock SGLang audio must remain strictly below 489,600 PCM samples and 20.40 seconds at 24 kHz. The exclusive 255-frame boundary rejects the off-by-one case in which max_new_tokens=256 can yield 255 decodable frames; a frame-aligned accepted response therefore contains at most 254 frames (20.32 seconds). This excludes the known length boundary but does not establish natural EOS, which remains unknown.

Profile	Engine	Natural EOS	Length limited	EOS unknown	Validated policy
B1	Native	400	0	0	Natural EOS required
B1	SGLang	0	0	400	Unknown retained
B3	Native	420	0	0	Natural EOS required
B3	SGLang	0	0	420	Unknown retained
B6	Native	480	0	0	Natural EOS required
B6	SGLang	0	0	480	Unknown retained

11. Container footprint and provenance

Implementation	Local unpacked size	Local Docker image ID	Registry manifest / compressed size
Native	4.83 GiB	sha256:b716553161f7b5de41d1cad9ca512d213fad72b282a368194778aad30cf9c000	not evidenced
SGLang	27.32 GiB	sha256:9930cc808840e9bac03577f664fda8b44735eb1e531c56fec8e9ad14c9eb41d2	not evidenced

Local size is Docker's inspected local unpacked/virtual Size value. Registry manifest digests and compressed sizes appear only when separately digest-bound registry evidence exists. Startup was not measured by these already-running-container benchmark runs and is therefore not reported.

12. Limitations

- Stock SGLang exposes completion-buffered audio and unknown EOS metadata.
- Performance was measured on one DGX Spark and is not generalized to other accelerators.
- Transport and performance qualification do not replace a separate human speech-quality review.

13. Raw evidence appendix

The following digests are the immutable audit trail used by this report. The generator verified byte lengths and SHA-256 values before parsing any record.
